100Mbps optical module bandwidth

Overview

Technology: This module employs four parallel lanes for both transmission and reception, with each lane capable of 25Gbps, resulting in a total bandwidth of 100Gbps. Application Scenarios: Ideal for short-distance interconnections within data centers. A 100M fiber optic transceiver is a hot-pluggable network component that converts electrical signals into optical signals and vice versa, enabling data transmission over fiber optic cables at Fast Ethernet speeds (100Mbps). It is cost-effective, consumes low power, and. Modern data centers rely on high-speed optical links, and 100G optical transceiver modules (especially the QSFP28 form factor) are now foundational for this connectivity. They are. The Cisco® 100GBASE CFP modules offer customers 100 Gigabit Ethernet connectivity options for data center networking, enterprise core aggregation, and service provider transport applications. The Cisco 100GBASE-LR4 (Figure 1) CFP module supports a link length of 10 kilometers on standard. HTF's QSFP28 100G SR4 is a parallel 100Gb/s Quad Small Form-factor Pluggable (QSFP28) optical module. It provides increased port density and total system cost savings.
