A 100m fiber optic router only has 50m speed

Overview

A: It varies with the data speed and fiber type. However, the maximum distance for all multimode fibers will be less than 2km. Q: Can I use single-mode fiber for a short. The Deco Main unit has a speed of 1000 Mbps, but the Deco 2nd unit only has a speed of 100 Mbps. This is despite the fact that both Deco units have the same specifications and are connected directly to the same router (Gigabit port). Before troubleshooting, remember that your router can't create speed that your Internet connection doesn't provide. For example, if your Internet service provider (ISP) only delivers 500 Mbps to your home, your. I had a 1gig fiber connection installed but speeds are only showing around 170mbps. They WERE reading between 5-30mbps but I uninstalled and reinstalled my network driver and while that was still an improvement it's nowhere near what it should be. 1 my router says on the 5ghz that the speed is 800Mbs and on connected devices it says my laptop is at 500mbs but when I do a speed test I only get 50-60Mbs, I live in Australia and I am using Telstra cant get 5G in my area and I am on fttn (fibre to. A better solution may be to use fiber and a fiber media converter at each end, as it negates the below and is future-proofed (i. 10Gbit), while also avoiding all the below since it's non-electrical, more resistant to water damage, easier to work with, and won't be affected by direct or nearby.
