Cable tray capacity 40

Overview

The 40% fill limit for cable trays is specified in NEC Article 392. It applies to ladder-type and ventilated troughs for most cable types. Solid-bottom trays use a different (lower) fill calculation. Select Fill Standard: Choose 40% for power cables (NEC compliant) or 50% for. Standard NEC (National Electrical Code) Rule: Generally, you should not exceed a 40% to 50% fill ratio for control and signal cables. NEC Article 392 limits fill ratios based on cable type and arrangement — single-layer or stacked — to ensure adequate ventilation, maintain current-carrying capacity, and provide space. Cable tray fill is a way to estimate how much space cables take up inside a tray, often expressed as a percentage. Higher fill can make pulling, cooling, and future additions harder.
