Cable tray material code

Overview

IEC 61537 is the internationally recognized benchmark for metal cable tray systems. It applies to cable trays made of steel, stainless steel, aluminum, or other metallic materials. The standard ensures these systems can handle the physical and electrical loads they're exposed to. B manufactures its cable tray in a range of materials with a variety of finishes. The selection of material and finish is a function of the environment in wh tant in a wide range of environments, and easily formable (Appendices II and III). Aluminum's exceptional corrosion resistance, particularly. us- trations without notice. no warranty, either expressed or implied, is made as to either its applicability to or its compatability with specific requirements of this information, nor for damages. It is the first joint effort of NEMA and CSA International to put in one place standards for metal trays per both NEMA and CSA methods. For proper installation, design, and maintenance, adherence to international standards is essential.
