Can outdoor fiber optic cables be run through conduits indoors

Overview

While indoor installations may not require conduit in some cases, outdoor, underground, underwater, or aerial installations almost always do. Fiber optic cables are categorized based on their deployment environment: indoor fiber optic cables and outdoor fiber optic cables. Each type is designed with specific features to ensure optimal performance under varying conditions. Indoor cables can be installed in raceways, cable trays above ceilings or under. A conduit is a protective tube or channel that houses the fiber optic cables, shielding them from moisture, dust, physical stress, and other environmental factors. With these assemblies we mention in this article, the widest point. Installing outdoor cables inside of buildings is restricted by the standards. DIN EN 50174-1:2020-10 (chapter 4. 3) both require that cables that do not meet the fire protection regulations or the requirements of Euroclass Eca may be routed freely. Fiber optic cable transmits data as light pulses through thin strands of glass or plastic, offering high speed and bandwidth.
