CIF price for long-distance optical cable OS2

Overview

Q1: How much does fiber optic cable cost per foot in 2025?

A: The price varies significantly by type. On average, Single-mode (OS2) ranges from $0. The price swing usually depends on the fiber count (e., 12-core vs 96-core) and brand. Generic glass is cheap; premium glass (like Corning) costs more but. OS2 cable can support long-distance applications, but the real distance is determined by transceiver reach, power budget, connector count, splice loss, cable attenuation and safety margin. Multimode fiber is widely used for short-distance optical transmission. It has a larger core than singlemode. This article explains the core differences between OS1 and OS2 singlemode fibers, as well as OM3, OM4, and OM5 multimode fibers—to help OEM clients, installers, and data center engineers make informed decisions. Commercial building installations with 100-200 network drops generally range from $15,000 to $30,000.
