# Concept of Communication Power Supply System

## Overview

The communication power supply is the power supply that provides AC and DC power to the communication equipment, and is the energy guarantee for the entire communication network. Effective battery management and regular maintenance are vital for extending the lifespan of backup power systems and ensuring reliability during. PULS power supplies with an integrated EtherCAT ports can be connected directly to EtherCAT controllers – without the need for additional gateways, providing easy and rapid access to all application data and power supply functions. The real-time capabilities and high-speed transmission of EtherCAT. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. A power efficient design is required that supplies both the higher voltage analog circuits and multiple. According to the report of China Information and Communication Network, the market share of communication power supply is as high as 35%. 5 Survey Diagram, Block Diagram and Functioning Principle of the d. 5 kVA 266Power supply mode develops towards decentralized power supply Not long ago, some users in China still adopted centralized power supply mode, that is, power supply equipment was installed in the power room and battery room, and the centralized power supply supplied power to various communication.
