Debugging a Layer 3 Optical Module Switch

Overview

This guide gives a practical, CLI-focused workflow for checking SFP health and diagnostics on Cisco switches, shows the exact commands you'll use, explains what the numbers mean, and compares OEM (Cisco) vs third-party modules so you can pick the right SFP module supplier. This guide gives a practical, CLI-focused workflow for checking SFP health and diagnostics on Cisco switches, shows the exact commands you'll use, explains what the numbers mean, and compares OEM (Cisco) vs third-party modules so you can pick the right SFP module supplier. To enable debugging of the power controller and Power over Ethernet (PoE) system, use the debug ilpower command in privileged EXEC mode. To disable debugging, use the no form of this command. debug ilpower {cdp | event | ha | ipc | police | port | powerman | registries | scp | sense} no debug. Functional Debugging Commands Reference In this context, PHY can be understood as an optical module. When testing PRBS, there are 3 test nodes: MAC ----> PHY, PHY -----> MAC, and PHY ----- PHY. Example:. This document provides troubleshooting steps for ISDN BRI Layer 3 using the debug isdn q931 command to help identify and resolve layer 3 issues during ISDN call establishment and teardown. This document also assumes that you have verified that ISDN Layers 1 and 2 on both ends of the circuit are. This guide uses the Moduletek SFP-25G-SR optical module connected to a Cisco C9300 switch as an example. Check Optical Module and Port Status Execute the following command to view detailed interface and optical module status: show. When debugging a system, it is important to be able to quickly identify the root of a problem. The Diagnostic commands enables an insight into the physical layer components where the user is able to see information such as a cable status (plugged/unplugged) or if Auto-Negotiation has failed. Below. When working with Extreme EXOS switches, it's often necessary to check the details of the optical transceivers connected to the ports. Here's how you can do it effectively.
