# Distribution box lighting switch burns out

## Overview

It can occur due to overloaded circuits, short circuits, or ground faults. Solution: Identify the Cause: Check if the breaker is tripping due to overloading. This often happens when too many devices are plugged into one circuit. Reducing the load on the circuit or redistributing. When the main switch is turned off or burnt out, none of the panel will have any power supply but could still be live! With an RCD or GFCI Main Switch, there may be some power cuts before it burns out. However, like any other electrical component, it can encounter problems over time. To help you with this problem, here are some factors that may cause a breaker to burn and what you can do for prevention and safety. Faulty. Issue: Frequent tripping of circuit breakers is one of the most common issues in distribution boards. When they start tripping, overheating, or making strange noises, it's more than just an inconvenience - it's your home's cry for help. In this guide, we'll walk through these.
