Distribution Box Self-Inspection Items

Overview

☑ Ensure the distribution box has a "Personnel Working" sign before inspection. ☑ Do not open the distribution box in rainy or damp conditions. ☑ Wear insulated shoes and gloves during inspection.

Key Takeaways

A thorough distribution box self-inspection includes visual checks, internal component inspection, testing, cleaning, and documentation, along with strict adherence to safety precautions. 1.

Visual Inspection

Check the enclosure for corrosion, rust, or physical damage and ensure all labels and warning signs are legible. Look for burn marks, discoloration, or signs of overheating. Verify that the box is securely mounted and free from water or abnormal liquids.

Ensure ventilation openings are clear and unobstructed. 2.

Internal Inspection

Open the box and check for dust, debris, or moisture. Inspect circuit breakers, fuses, and wiring for proper operation, tight connections, and any signs of burning or damage. Verify the functionality of surge protection devices, RCDs, and GFCIs.

Check indicator lights and ensure the main switch is in the correct position. Examine connectors and terminals for corrosion, looseness, or overheating using a multimeter or infrared thermometer. 3.

Testing

Measure voltage levels and check for three-phase voltage balance within ±5%. Test grounding system continuity and resistance, ensuring grounding resistance is within acceptable limits (
