DIY Funnel Bridge

Overview

DIY Funnel: Fixing Broken Part with Design Software! #shortsBroken part?

No problem! We're designing a custom funnel to bridge the step down from the infil.

Key Takeaways

You can create a DIY funnel bridge either as a physical tool for pouring liquids or as a marketing bridge funnel to guide prospects toward a product.

Physical DIY Funnel Bridge

A physical funnel bridge is a simple tool to transfer liquids, powders, or small items between containers. You can make one using everyday materials: Paper Funnel: Fold a square or letter-size sheet into a cone, cut the tip to create an opening, and optionally tape the sides for stability. This works for spices, liquids, or small grains.

Plastic Bottle Funnel: Cut the bottom off a clean plastic bottle, remove the cap, and use the neck as the funnel spout. This is ideal for larger volumes of liquid. Aluminum Foil Funnel: Roll a sheet of aluminum foil into a cone, cut the tip for flow, and optionally use a paper model inside for shape stability.

Wash and reshape for reuse.

Advanced DI

Y Funnel: For precision pouring, you can create a flexible nozzle funnel using high-grade plastic with a threaded adapter to fit multiple container sizes, reducing spillage. These funnels are useful for kitchen tasks, filling bird feeders, gas tanks, or craft projects.

Marketing Bridge Funnel

A bridge funnel in marketing is a strategy to warm up prospects before sending them to an affiliate product page: Purpose: It builds trust, captures leads, and pre-frames the product, increasing conversion rates. Structure: Typically, a bridge funnel connects a squeeze page or content piece to the product page. The bridge page contains persuasive copy highlighting benefits and advantages.

DI

Y Setup: Using tools like FunnelKit for WordPress, you can create a high-converting bridge funnel by selecting a template, importing it, and customizing the pages for your audience. Include opt-in forms, sales copy, and call-to-action buttons. Tips: Focus on long-form or concise persuasive copy, maintain authority even if products go out of stock, and ensure the design is dedicated to conversion.

Summary

Whether you need a physical funnel for practical tasks or a marketing bridge funnel for affiliate sales, both can be created DIY with simple materials or software tools. Physical funnels use paper, bottles, or foil, while marketing funnels use WordPress plugins and persuasive content to guide prospects effectively.
