Electrical components of the main power distribution box at the construction site

Overview

The main distribution accommodates meters, residual current devices (RCD), and miniature circuit breakers (MCB). Sub-distributions reduce cable lengths to workplaces – such as areas for concrete demolition, building gutting, tunnel heading, or natural stone extraction – and. The construction site power connection is the temporary, compliant connection of the construction power supply to the public power grid. This includes a connection point (for example via a site connection box), the main distribution with protection and metering devices, sub-distributions, cables.
