Fiber Optic Cable Final Testing Procedures

Overview

This article explains how to test fiber cable quality using standardized engineering methods for FTTH, ODN, and data center deployments. As the components like fiber, connectors, splices, LED or laser sources, detectors and receivers are being developed, testing confirms their performance specifications and helps. Fiber optic systems include both passive components and active electronics. Passive components consist of all the links and connections that unite communication devices on the overall network. Visual. FOA "Quickstart Guides" are short, simple guides to basic fiber optic tests. All are written in the same straightforward format: what equipment do you need, what are the procedures for testing, options in implementing the test, measurement errors and documenting the results.
