Fiber Optic Cable Splice Testing Instrument

Overview

An OTDR helps pinpoint faults, breaks, and splices along a fiber link with serious accuracy. Crucial for certifying new links or troubleshooting existing ones. These specialized devices are engineered to manipulate, terminate, join, and verify light-carrying strands without introducing microscopic fractures or contamination. At Weunion, we categorize these essential instruments into four primary operational phases: Preparation: Removing protective layers. For the best experience on our site, be sure to turn on Javascript in your browser. Unlike copper cabling, optical fiber requires precise handling, clean end faces, and accurate measurement to avoid signal loss and performance degradation. Buy fiber optic tool kits to splice, test and inspect fiber optic network cabling, from Specialized Products.
