Fiber Optic Switch SFP Transceiver

Overview

An SFP module is a small, pluggable optical transceiver that fits into the SFP port of a networking switch or other device. Sometimes, it is known as the mini-GBIC (gigabit interface converter) or SFP transceiver. The term SFP stands for Small Form-Factor Pluggable, referring to its standardized size and interface, which allow the module to be easily. SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables. The advantage of using SFPs compared to fixed interfaces (e. They provide high-speed data transmission and allow flexibility in choosing different types of fiber optic or copper cables depending on the needs of the. FS offers a growing portfolio of optical transceivers, with speed range from 100M, 1G, 10G, 25G, 40G, 50G, 100G, 200G, 400G to 800G and beyond. These interchangeable modules support various media types, including copper or fiber-optic cables, providing flexible networking options based on specific requirements.
