Fireproof Sealing of Cable Trays in Bolivia

Overview

Cable trays and busways at floor level or at slab penetrations shall have a waterstop no less than 50 mm in height. At slab penetrations, provide 20–30 mm of firestopping and install a fire-support plate at the top. Sealing shall be tight and reliable, without visible. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. The Product is a water-based ablative coating developed for the fire protection of grouped or bundled electrical cables, cable trays and for cable penetration seals IEC 60332 (Cat. A) and IEC 60331 test The Product must be stored in the original, unopened and undamaged sealed packaging in dry. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. A better alternative to link-type seals, the SLIPSIL Plugs utilize a proprietary self-compression design, and have no bolts, nuts or metallic parts that. In case of fire, it is essential to protect the electrical cables enabling all installations to function correctly. Besides, most of those installations are directly linked to the protection against fire: alarm, detection, illumination of escape routes, smoke extraction systems, etc. Those. The effectiveness of fireproof sealing systems in preventing the spread of fire in high-rise building cable shafts relies on the properties of various sealing materials and the construction process. Therefore, a comprehensive evaluation is necessary.
