For beam splitters

Overview

Reflection beam splitters reflect parts of the incident radiation in different directions. These partial beams show exactly the same intensity. Typically, reflection beam splitters are made of metal and have a broadband spectral characteristic. Due to their compact design, beam splitters of this type are particularly easy to install in infrared detectors.

Key Takeaways

Beam splitters are optical devices used to divide or combine light beams, enabling applications in interferometry, imaging, telecommunications, and polarization control.

Core Function

Beam splitters are designed to split an incident light beam into two separate beams, typically a reflected and a transmitted beam, or to combine two beams into one. This is achieved through partial reflection and transmission at a coated optical interface, with the splitting ratio precisely controlled by thin-film or metallic coatings. They can handle unpolarized light or separate light based on polarization states, depending on the type of beam splitter.

Common Applications

© 2026 EXF OPTICAL NETWORKS - All rights reserved

Interferometry: Beam splitters are essential in devices like Michelson and Mach-Zehnder interferometers, where they divide light into two paths for phase comparison and interference measurements. Imaging and Microscopy: They allow simultaneous illumination and observation, or the combination of multiple light sources in fluorescence microscopy and other imaging systems. Telecommunications: In fiber optic networks, beam splitters distribute optical signals to multiple channels or receivers.

Polarization Control: Polarizing beam splitters separate light into S- and P-polarized components, useful in laser systems, optical sensors, and quantum optics experiments. Laser Systems: Beam splitters enable power monitoring, beam sampling, and alignment without interrupting the main beam path.

Types of Beam Splitters

Cube Beam Splitters: Constructed from two right-angle prisms cemented together, offering mechanical stability and precise 90-degree output angles. Plate Beam Splitters: Thin glass plates with reflective coatings, lightweight and suitable for space-constrained setups, often used at a 45° angle of incidence. Pellicle Beam Splitters: Ultra-thin membranes that minimize ghosting and optical path distortion, ideal for high-precision applications.

Prism Beam Splitters: Such as Wollaston prisms, which separate light based on polarization using birefringent materials. Other Variants: Brewster windows, wedged plates, and lateral displacement designs are used for specialized optical setups requiring minimal reflection losses or multiple beam copies.

Summary

Beam splitters are versatile optical components that enable precise light manipulation across scientific, industrial, and communication applications. Their selection depends on the desired splitting ratio, polarization requirements, wavelength range, and mechanical constraints, making them fundamental in modern optical engineering.

Article Content

Thorlabs · Optical Beamsplitters

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back

Beam splitter

OverviewReflection beam splittersDesignsPhase shiftClassical lossless beam splitterUse in experimentsQuantum mechanical description

Reflection beam splitters reflect parts of the incident radiation in different directions. These partial beams show exactly the same intensity. Typically, reflection beam splitters are made of metal and have a broadband spectral characteristic. Due to their compact design, beam splitters of this type are particularly easy to install in infrared detectors. At this application, the radiation enters through the aperture ope

Optical Beamsplitters | Beamsplitter Selection | Edmund

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems.

What are Beamsplitters?

Beamsplitters are optical components used to split incident light at a designated ratio into two separate beams. Additionally, beamsplitters can be used in reverse

Beam Splitters – optical power splitter, beamsplitter, thin

What are Beam Splitters? A beam splitter (or beamsplitter, power splitter) is an optical device which can split an incident light beam (e.g. a laser beam) into two

Beamsplitters Product Overview

Experience has shown that the use of beam splitters with a smaller PV or radius of curvature specification is advisable for STED microscopy and general confocal

Beam Splitters – Buyer''s Guide & Supplier List | RP

This buyer''s guide for beam splitters provides technical background, comparison of major types, selection criteria, and an overview of suppliers.

Beam Splitter Selection Guide

Newport offers a wide variety of Beamsplitters in various shapes. Circular beamsplitters, plate beamsplitters and cube beamsplitters can be purchased for polarizing or non polarizing beamsplitting

Beam Splitters, Separators & Combiners

© 2026 EXF OPTICAL NETWORKS - All rights reserved

Beam splitters, separators and combiners are identical components that are arranged in the beam path depending on the application. Basically, they are

The Buyer''s Guide to Beam Splitters | Blue Ridge Optics

Matching the beam splitter''s specifications to the characteristics of the light source ensures optimal performance. This minimizes light losses and aberrations while maintaining the

Beam Splitter Selection Guide

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Shop Beam Splitters & Passive Optical Splitters

Explore our collection of optical cable splitters and PON splitters for sale. Optical beam splitters are used to split the fiber optic light evenly into several parts at

Diffractive Beam Splitter Solutions

Diffractive Beam Splitters are planar element splitting single laser beam into multiple channels. Learn more on various Diffractive beamSplitter options

Optical Splitters in Modern Networks

Unraveling the Power of Optical Splitters in Modern Networks In today''s optical network topologies, the advent of fiber optic splitters contributes to maximizing the performance of optical

How to Use a Beamsplitter Cube?

These versatile devices split an incident light beam into two or more separate beams, each with specific optical properties. Understanding how to use a beamsplitter cube is crucial for

[2607.09513] Qubit-Boson Hybrid Beam-Splitter Gate with Kerr ...

We introduce a hybrid qubit-boson beam-splitter gate in which a microwave cavity mode couples to an exchange-dressed two-level subsystem of an interacting two-qubit system in the

Development and evaluation of EUV beam splitters for industrial ...

Mo/Si multilayer-based free-standing beam splitters (BSs) have been developed and evaluated for industrial applications in the extreme-ultraviolet (EUV) wavelength region. The BSs were fabricated with

ISO 9211-7:2021

© 2026 EXF OPTICAL NETWORKS - All rights reserved

This document specifies minimum requirements on the optical effects and the mechanical, chemical and environmental properties of neutral beam splitter coatings. This document applies to neutral beam
