Gigabit fiber optic router only has 20Mbps

Overview

Make sure that you're using a Cat5e or Cat6 ethernet cable, otherwise that could be causing the lower speeds. First, unplug your router, and test the connection to the "LAN" port on the ONT using a computer. You should be getting close to 1,000 Mbps download and upload that. I have a er-4 and AP longe range setup with my FiOS gigabit internet. Why are my speeds so slow?

This subreddit is here to provide unofficial technical support to people who use or want to. Are you in search of the perfect router for your optical fiber internet connection?

Look no further! In this guide, we'll explore the top options available on the market to ensure you experience blazing-fast speeds and seamless connectivity. Whether you're streaming, gaming, or working from home. Pc has bad internet speed even with fast internet - only getting 20mbps! Hey everyone I have a very odd problem with my Pc. I used the same wifi test on my laptop. Many internet users on a 1 Gbps plan wonder why they never actually see 1,000 Mbps; even under the best circumstances. Slow TP-Link internet can have more than one cause: your router settings, your modem, your Internet service provider (ISP), or your wireless environment may each play a role. This page covers fixes for both wired and wireless slowdowns so you can find the right solution for your situation. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet.
