How big is the fiber optic tray

Overview

The overall dimensions of the tray are 182 x 148 x 7mm and the maximum splice capacity of 24 fibres is based on 24 heatshrink 3A splice protectors up to 45mm long. A fiber optic splice tray is a component of fiber optics management that is designed to securely and efficiently store and organize fiber fusion splice and slack. The Fiber Optic Tray KM 7 is designed to hold up to 16 optical fibers and adapters. Fibers are terminated with pigtails to 8× SC or 16× LC adapter – with additional PLC Splitter capacity. Made from high-quality ABS plastic, it accommodates up to 24 splices and includes a protective cover plate to ensure safe operation in telecommunication and data center. The Integrated Routing (IR) single element tray is manufactured from ABS and finished to a high specification to eliminate the risk of snagging or microbends. It is used to provide protection and organize fiber splices.
