How to apply reflective stickers to cable trays

Overview

Gently apply the transfer tape (adhesive side down) over your decal. Use a squeegee or credit card to burnish (rub or polish) the tape onto the vinyl. To apply decal, peel away the vinyl backing paper at. The best way to stop your cable labels from peeling off or fading is to use the right label type for your environment and application, apply them on clean, dry surfaces, and use a professional-grade label printer designed for the job. Yes, there really is such a thing as “the wrong label,” and no. One increasingly common requirement is the ability to emboss or stamp the client's logo directly onto straight cable tray sections. This is not a surface label or paint marking, but a permanent, integrated identification feature formed in the metal itself. Why Do EPC Projects Specify Logo Embossing. Here are everyday places where they make life easier: Label your monitor cable, laptop charger, and printer cord so you don't accidentally kill your WiFi during a video call. Gaming console, streaming box, sound bar — label everything once and never yank the wrong cord again. The self-adhesive material conforms to the shape of your tray and are easily applied with minimal preparation.
