How to choose a 100Mbps router with fiber optic internet

Overview

For fiber optic internet speeds of 100 Mbps or higher, a router supporting at least 1 Gbps is required. Look for routers with AX or AC designations (Wi-Fi 5 or 6) that support faster speeds than older N standards (Wi-Fi 4). Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. To simplify this selection procedure, here are 3 key factors to be considered: Data Transfer Rate – It is the maximum speed your router can handle. The real bottleneck in your network isn't the cable coming into your home; it's the hardware translating that signal into usable WiFi, especially when multiple. The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection.
