How to Choose a Wireless Router for a 100M Fiber Optic Cable

Overview

Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. For budget-conscious households, the TP-Link Archer AX55 delivers reliable Wi-Fi 6 performance without the premium price. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. After providing you with the general image about the eight best routers for fiber internet, I decided to compile a comparison table. This table should be useful so you can compare each of my top picks and see the differences in their features, price, and suitability. You don't just need any router — you need hardware with multi-gig WAN ports, modern WiFi standards, and enough processor overhead to. Every model in this guide has been evaluated for its ability to handle full-duplex multi-gig fiber without packet loss or CPU overload.
