Is investing in fiber optic cables worthwhile

Overview

Installing fiber optic cabling is an investment in long-term performance. While the upfront cost may be higher than copper, the payoff comes in lower maintenance, fewer outages, and the ability to handle tomorrow's technology without another overhaul. For many organizations, the answer is yes, especially if your business depends on speed, reliability, and future growth. But before making the jump, it's important to understand what makes fiber different and when it truly makes sense for your setup. But there are more reasons that fiber. The aftermath of the Covid-19 pandemic has highlighted the gap in high-speed home internet, leading to increased investment in fiber optic network deployment as the limits of copper infrastructure have become apparent. This article breaks down the unit.
