Fiber optic drop cables are the critical link between the main fiber optic network and individual buildings or residences. They deliver the high bandwidth and low latency advantages of fiber optics directly to the end user. Designed to deliver high-speed data, voice, and video services directly to subscribers, drop cables ensure reliable, high-performance connectivity in fiber-to-the-home. A fiber optic drop cable is the final segment of the Optical Distribution Network (ODN). It creates the critical link between the distribution cable terminal (such as a Fiber Access Terminal or FAT box) and the subscriber's premises (connecting to an Optical Network Unit or ONU).
