Lc type optical attenuator

Overview

LC Attenuators are essential devices in fiber optic networks, designed to precisely control optical signal power. Compatible with LC connectors, known for their compact and push-pull design, these attenuators offer adjustable attenuation from 1 dB to 60 dB. As optical passive devices, FS attenuators are mainly used in fibre optic to debug optical power performance & optical instrument calibration correction & fibre signal attenuation to ensure the optical power in a stable and desired level in the link without any changes on its original transmission. As optical passive devices, FS attenuators are mainly used in fibre optic to debug optical power performance & optical instrument calibration correction & fibre signal attenuation to ensure the optical power in a stable and desired level in the link without any changes on its original transmission. Optcore Offers High-quality LC Fixed Fiber Optic Attenuator (Singlemode, Male to Female, APC, 1~25dB) Fiber optic attenuators are devices to reduce the optical fiber power by a certain level within the fiber optic network. They are used to attenuate the input optical power, preventing distortion in the optical receiver caused by excessive input power.
