Main switch in home electrical distribution box

Overview

The Main Switch is a key player in controlling the flow of electricity in your home - it serves as the on/off switch for your entire electrical system, and controls the flow of electricity delivered from your electricity provider to your switchboard. The central hub manages and distributes your house's electrical circuits. It also contains safety devices such as fuses, circuit breakers, and residual current devices (RCDs) that protect you and your appliances from electric shocks. A main switch box is vital to your home's electrical system. It decides who gets power and who doesn't. But it's not just about control; it's about safety too. Knowing its location. A switchboard, also known as a circuit board, fuse box or power board, is an electrical control panel used to direct and manage the flow of electricity within your home.
