Methods for Connecting Aluminum Alloy Optical Cables

Overview

There are a variety of techniques to join aluminium including mechanical fasteners, welding, adhesive bonding, brazing, soldering and friction stir welding (FSW), etc. Various techniques are used based on the cost and strength required for the joint. Among these materials, aluminum stands out as a versatile and indispensable. As an experienced aluminum manufacturer, Chalco Aluminum offers a one-stop cable termination solution, covering a full range of copper lugs, aluminum lugs, and bimetal cable lugs, and providing integrated support from design and production to installation. All products comply with IEC 61238, UL. Aluminium Alloy ADSS OPGW Fiber Optical Splice Closure The metal joint box are applicable for connection protection of special optical cables,with the functions of direct and branch connection, with the maximum of 6 optical cables, which mainly for overhead rods and towers. Q: Do you provide. Gas Tungsten Arc Welding (GTAW) AKA Tungsten Inert Gas (TIG) Welding: Uses a tungsten electrode and inert gas shielding to create clean, high-precision welds. It is best suited for thin sheets but requires extensive skill and control.
