No light module connected light module disconnected

Overview

4GHz WiFi, verify power LED, and re-pair through the Blink app. If your Sync Module is offline or if you encounter any issues during setup, begin by verifying the LED patterns on the device. Then, proceed with the troubleshooting steps outlined below: If your Sync Module displays a solid blue and a blinking green LED, this indicates the Sync Module is offline. The module LED may show solid red or flashing blue indicating it has lost its WiFi connection and cannot communicate with Blink servers. Recognize these?

Here's what usually causes it. Below, we'll detail each of these and provide steps to get your Sync Module back online. Wi-Fi connectivity is one of the most common. The blink sync module acts as the control hub for connected devices relaying network details and commands to the devices. I often have to reset everything for it to connect. Anyone know what is wrong with my system!?

! Hi @Harry Fetter, welcome to our Amazon Digital and Device Forum! I'm sorry.
