Optical Module Interface Circuit

Overview

Optical modules are mainly packaged by optoelectronic devices TOSA/ROSA, functional circuits and optoelectronic interface components. The optical transceiver component TOSA/ROSA is the core part of the optical module, mainly including the optical receiving module and. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Design of Integrated Circuits for Optical Communications, B. Heck, John Wiley & Sons, 2009. Its primary function entails converting electrical signals into optical signals. This assembly comprises a light source, such as a laser diode or a semiconductor light-emitting diode (LED), an optical interface, a. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications.
