Plastic Fiber Optic Patch Cord Technology

Overview

Plastic fiber optic tracking patch cords are patch cords made of polymer plastic optical fiber (POF) and incorporate tracking management functionality. Compared to traditional glass fiber, POF is lighter, more flexible, and lower in cost. Whether it's cloud computing, big data analytics, or daily office collaboration, reliable. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks. Its chief advantage over the glass product, other aspect being equal, is its robustness. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization. Unisol Plastic Optical Fiber (POF) patch cables are engineered to deliver reliable short-distance data transmission using a durable and flexible plastic optical fiber cable.
