Price of Finnish Lightweight Cable Trays

Overview

This steel wire basket cable tray from RS PRO offers an easy solution for holding cables and preventing them from overheating. It comes in a length of 3 metres with a width of 100 mm and a depth of 60 mm.

Key Takeaways

The price of Finnish lightweight cable trays varies depending on material, type, certification, and supplier, with aluminum and plastic trays generally being more cost-effective than steel alternatives.

Factors Affecting Price

Material: Lightweight cable trays are typically made from aluminum or plastic, which are easier to handle and install compared to steel. Aluminum trays are certified (CSA, UL, NEMA) and offer durability while remaining lightweight, which can reduce labor costs during installation. Plastic trays are often used for corrosion resistance and electrical insulation, particularly in industrial or commercial settings.

Type of Tray: Common types include ladder, perforated, and solid-bottom trays. Ladder trays are widely used for heavy cable loads and ventilation, while perforated trays are lighter and allow better airflow. Solid-bottom trays are used for sensitive cables requiring full support.

Certification and Compliance: Finnish regulations require compliance with fire safety and electromagnetic compatibility standards, which can influence pricing. Certified trays from reputable suppliers may cost more but ensure compliance with Nordic and EU standards. Market Dynamics: Prices are influenced by supply chain factors, import costs, and demand from energy, industrial, and construction sectors.

The Finnish market is competitive, with domestic manufacturers, European suppliers, and global specialists offering a range of solutions.

Typical Procurement Considerations

Bulk Orders: Prices are often lower per unit when purchased in bulk, especially for ladder or perforated trays. Supplier Selection: Onninen and other Finnish distributors provide a range of cable trays, but prices are accessible only after account registration. Installation Costs: Lightweight trays reduce labor costs due to easier handling and faster installation compared to steel trays.

Summary

While exact prices are not publicly listed, aluminum and plastic lightweight cable trays in Finland are generally priced based on material, tray type, certification, and order volume. For precise pricing, contacting suppliers like Onninen or verified bulk distributors is recommended. Understanding the market trends, material specifications, and regulatory requirements will help in obtaining competitive quotes and ensuring compliance.
