Prices of Metal Cable Trays and Cable Trays

Overview

Stainless Steel Cable Trays: This type of metal cable tray provides a strong and long-lasting performance. Easy to handle and with excellent corrosion resistance.

Key Takeaways

Metal cable trays typically range from $1. 20 to $25 per meter depending on material, type, size, and surface finish. Price Ranges by Material and TypeStandard Steel Trays: Common for heavy industrial applications, priced around $1.

20 to $9. 60 per meter, depending on thickness and width, with bulk orders often requiring minimums of 200 meters. Galvanized Steel: Balances durability and cost; widely used in commercial and industrial projects.

Stainless Steel: Offers corrosion resistance but is more expensive, often at the higher end of the $2–$25 per meter range. Aluminum Trays: Lightweight and rust-proof, suitable for renewable energy or data center applications, generally pricier than steel. Wire Mesh Trays: Ideal for IT and data centers, lightweight and cost-effective, often cheaper than ladder trays.

Ladder Trays: Designed for heavy power cables, more expensive due to higher material use and load capacity. Perforated or Trough Trays: Mid-range pricing, offering good ventilation and cable support.

Factors Affecting Pricing

Tray Dimensions: Wider or thicker trays require more material, increasing cost. Surface Treatment: Hot-dip galvanizing (HDG) or powder coating improves durability but adds to upfront cost. Order Quantity: Bulk orders can reduce per-meter cost by 20–40%.

Installation and Labor: Skilled labor, site accessibility, and height of installation can influence total project cost. Market Trends: Prices fluctuate with steel and aluminum market rates, trade tariffs, and regional demand.

Typical Applications

Industrial Facilities: Heavy-duty steel trays for power distribution. Data Centers & IT Infrastructure: Wire mesh trays for fiber optic and copper cables. Commercial Buildings: Aluminum or perforated trays for moderate loads.

Cost-

Saving Tips

Consider bulk purchasing or importing from cost-effective suppliers to reduce per-meter prices by up to 50%. Use wire mesh or perforated trays instead of ladder trays when weight and load allow, saving 15% or more. Plan installation during off-peak seasons to avoid seasonal price surges.

Overall, selecting the right tray type and material based on load, environment, and project scale is crucial for balancing performance and cost. Prices for 2026 reflect both material choice and market trends, with steel remaining the most common and cost-effective option for heavy-duty applications.
