Pricing of network rack topology in data centers

Overview

Data Center Colocation Pricing: 2026 Cost Per Rack & kWWhat data center colocation costs in 2026, priced per rack, per kW, and per cabinet. Compare retail.

Key Takeaways

The cost of deploying a network rack in a data center typically ranges from $900 to over $6,000 per month in the U. S., depending on rack size, power density, location, and additional services. Key Factors Affecting Rack Pricing1.

Rack Size and Type

Full Rack (42U–45U): Standard for most deployments, accommodates multiple servers and networking devices. Costs are higher due to space and power requirements. Half Rack (21U–22U): Suitable for smaller setups, lower cost than full racks.

Quarter Rack (10–12U): Ideal for startups or minimal deployments, lowest cost per rack unit. 2.

Power Requirements

Power Density: High-density racks (10–30+ kW) cost significantly more than standard 3–5 kW racks due to increased electricity and cooling needs. Redundant Power: Additional circuits for failover increase costs but improve uptime. Basic Power Allocation: Some providers include a fixed power amount; exceeding it incurs extra charges.

3.

Colocation and Bandwidth

Rack pricing often includes space, cooling, network connectivity, and physical security. Additional bandwidth, cross-connects, or remote hands services can increase monthly costs by $1,000–$2,000 per rack. 4.

Location and Market

Data centers in Tier 1 cities or high-demand markets are more expensive due to better connectivity, lower vacancy, and higher operational costs. U. S.

Tier 3 facilities typically charge $900–$2,500/month for standard racks, while high-density racks in top-tier markets can exceed $3,000–$6,000/month. 5.

Scale and Complexity

Larger deployments with hundreds of racks or specialized equipment (blade servers, advanced storage arrays) require more labor and infrastructure, increasing costs. Rack and stack services, including installation, cable management, and airflow optimization, add to the total cost.

Pricing Examples

Planning for future expansion, airflow, and maintenance access is critical to avoid costly retrofits.

In summary, network rack pricing in data centers is highly variable, influenced by rack size, power density, location, colocation services, and deployment complexity. Businesses should carefully evaluate these factors and request detailed quotes to accurately budget for their data center infrastructure.
