Overview

The enclosure protects the electrical components from water, dust, and damage. When choosing one, check the IP or NEMA rating. This document provides specifications, ordering information, illustrations, and application instructions for the various sizes of non-concrete and precast concrete enclosures used in PG&E electric underground secondary distribution. The words boxes/enclosures have the same meaning and are used. NEC Article 314 establishes requirements for the installation and use of electrical boxes, conduit bodies, fittings, and handhole enclosures. A conduit body is a removable-cover section of a conduit system that provides access at junctions or termination points. Thanks to protection ratings and high quality ble (from 65 x 65 mm up to 361 x 254 mm) plus 3 different cover hei xes are available with a smooth surface or with multiple metric te boxes (glow wire tested el of resistance. 1. □ The Third party designs and constructs the substation.
