Should cable trays be made of steel or galvanized steel

Overview

In industrial settings, cable trays must withstand heavy loads and harsh chemicals. Stainless steel or galvanized steel trays are often the best choice. The only safe option that can be used in an open environment or a place with a high level of moisture is the hot-dip galvanized (HDG) steel. The wrong one is the most common error, which results in rust showing itself much earlier than. Steel is the most popular material for electrical cable trays due to its unmatched strength, versatility, and durability. Ensure your. Ventilated cable tray systems are commonly fabricated from a corrosion-resistant metal or from a metal with a corrosion-resistant finish. When pure, aluminum is soft and ductile. However, most commercial uses require.
