Single-module fiber optic transceiver module

Overview

A single mode SFP transceiver is an optical module that uses laser-based transmission over single mode fiber to deliver long-distance, high-speed data communication, typically at 1310nm or 1550nm wavelengths. SFP (Small Form-factor Pluggable) transceivers are essential components in modern fiber optic networks, enabling network devices such as switches, routers, and servers to transmit and receive data over optical fiber. By converting electrical signals into optical signals—and vice versa—SFP. Singlemode Fiber Optic Transmitters, Receivers, Transceivers are available at Mouser Electronics. Use the compatibility tool to check switch compatibility. FS can provide a wide range of solutions and design for unique needs. Provides seamless and flexible supply to respond to urgent and unpredictable demand worldwide.
