The main switch in the distribution box has no neutral wire

Overview

Answer: The wall plate would need to be removed to see if there is a neutral inside the switch box. It is insulated and carries current under normal conditions back to the transformer. According to NEC standards, the color used for neutral wires is white, while IEC and BS7671 standards. The most common lighting installation problem is a missing neutral wire in the switch box, which prevents modern smart switches from getting the power they need to function. This issue, common in older homes, turns a simple swap into a complex job requiring either new wiring or a special. In older residential construction, many switch boxes lack a true neutral wire due to a wiring method known as a “switch loop. A two-wire cable is then dropped down to the wall switch location, bringing the hot wire. in different terms: The two black are logically one wire; a splice on the black bus, with the red T'ing off the bus, and being switched before running to the light; that sounds right.
