The switch only displays the input port

Overview

Move the cable to a known good port to troubleshoot a suspect port or module. The show module command can indicate faulty, which can indicate a hardware problem. A single broken wire or one shutdown port can cause the problem where one side has a link light, but the other side does not. A link light does not guarantee that. Be sure the model of the switch you're using supports video output. The switch details page also has the tools that help. The layered approach allows us to focus on certain functions for certain layers, knowing what each layer can do. It can be very useful at troubleshooting connectivity issues and physical port issues, check the status of physical ports, watch how much traffic is passing through the interface, which IP address. With Auto Source Switch+, your monitor detects when connected devices are turned on and instantly switches to the new source signal.
