What are the surge protection devices for server rack networks

Overview

PDU with surge protection provides rack-level protection for multiple servers, storage, and networking devices. Rackmount PDUs or server rack power strips integrate MOV/TFMOV modules and optional LED surge indicators to ensure continuous operation. Today, we'll explore the top options in the market to help you make a savvy choice in safeguarding your gear. Install horizontally or vertically using included mounting screws, route the 15 ft cord to a grounded circuit, and verify LED status. These spikes, also known as power surges, can occur suddenly and last fractions of a second, yet still contain enough energy to destroy power. Data center surge protection is a mandatory, multi-zone electrical defense strategy using IEC-certified Surge Protective Devices (SPDs) to shield mission-critical IT infrastructure from transient overvoltages caused by lightning, grid switching, and internal load changes.
