What are the types of FC fiber optic patch cords available in Ukraine

Overview

These fiber optic patch cables are available in standard categories (OM1 to OM5), each with varying levels of performance. Jacket colors help distinguish between them: orange for OM1/ OM2, aqua for OM3 / OM4, and lime green for OM5. Fiber optic patch cords can be classified according to the fiber connector types, with the most common. Fiber optic patch cords refer to fiber optic cables with connectors at both ends and a thick protective layer. This is known as interconnect-style cabling. Unlike backbone trunk cables—which are typically multi-fiber. Today, manufacturers have introduced various fiber optic patch cord types tailored to different application scenarios, such as MPO/LC/SC/FC/ST patch cords, simplex/duplex patch cords, and single-mode / multimode patch cords.
