What is an 800g core switch

Overview

The core engine of an 800G switch is a 51. 2Tbps-class application-specific integrated circuit (ASIC), which not only provides bandwidth upgrades but also marks a key milestone in network architecture. 800G Ethernet is a next-generation networking standard delivering data rates of 800 Gigabits per second (Gbps). These switches ensure accelerated Ethernet connectivity across all data center environments, maintaining top-notch performance and feature richness. for advanced data center networking. For the most demanding environments, the 800G routing and switching platforms provide flexibility and choice for large scale cloud, AI, leaf and spine, routing transformation and hyperscale IO intensive applications. Breakout options include 2 x 400G, 4 x 200G, and 8 x 100G per port, with a maximum of 160 logical ports.

For the most demanding environments, the 800G routing and switching platforms provide flexibility and choice for large scale cloud, AI, leaf and spine, routing transformation and hyperscale IO intensive

AIS800-32O

The Edgecore AIS800-32O is a high-performance, low latency switch for high-performance data centers. A next-generation, highest-capacity switch for data center spine use case. Breakout options include

In-Depth Analysis Report on 800G Switches | FiberMall

This report will deeply analyze the technical standards, core silicon photonics landscape, system vendors'' solutions, and revolutionary changes in optical interconnect technologies

How to Choose the Right 400G/800G Ethernet Switch?

Choosing a 400G/800G Ethernet switch requires more than comparing port speeds. From switching fabric capacity and buffer design to RoCEv2 support and scalable architecture, this

2026 Data Center Switching Trends: From 400G to

A practical 2026 guide to 800G Ethernet adoption: spine-leaf design, congestion control, observability, optics and fiber planning, and how to upgrade.

A Comprehensive Market Insight into 800G Switches

The core engine of an 800G switch is a 51.2Tbps-class application-specific integrated circuit (ASIC), which not only provides bandwidth upgrades but also marks a key milestone in network...

800G Ethernet IP core | Altera

The ETC 800G Ethernet is designed as an interface that uses eight 106Gb/s lanes using two IEEE802.3 400G PCS instances with a single IEEE802.3 compliant 800G MAC.

1.6T Switch Era: Choosing Between CPO, NPO, and LPO for Next

At its core, LPO remains tied to traditional 1.6T switch architectures, merely trading the removal of the DSP for a drop in power consumption. It is by no

Top 10 Optical Transceiver Manufacturers in the World

Sourcing optics for your data center? Discover the top 10 optical transceiver manufacturers in 2026. Compare global giants and factory-direct OEM alternatives.

Core Switch Price Guide: 2026 Benchmarks & Cost Drivers

© 2026 EXF OPTICAL NETWORKS - All rights reserved

Learn how AI demand, component shortages, and modular 400G/800G adoption are driving core switch prices up—plus current B2B wholesale benchmarks from $600–$6,000 and subscription pricing
