What is the copper strip next to the cable tray called

Overview

Our earthing jumpers for the cable tray are made of a stranded copper conductor. The copper strip is insulated with a horizontal stripe. A 2-hole compression lug with 1/4″ or 3/8″ stud sizes is attached to the jumper for a solid connection. Changes the direction of the cable run horizontally. Here at Tamlex we have recently introduced an earth copper braid strip to provide a consistent earth throughout a cable tray installation. These strips can be easily. What is a Cable Tray System?

A cable tray system is a unit assembly of sections and fittings that forms a rigid structural system used to securely fasten or support cables and wiring. Think of it as a sophisticated “highway” for cables, keeping them organized, protected, and easily accessible.
