# What optical module should be used on the EG2 board

## Overview

An LED array on the front panel (top array) can be used either to properly position the electrodes or to track the movement of the larynx. Very-low-noise proprietary electronic design yields a usable signal for almost all adults and children over 4 years old. The unique, patented dual-channel configuration of the EG2-PCX2 enables it to indicate proper electrode placement and provide a quantitative indication of vertical laryngeal movement. ” Caution: EXPLOSION HAZARD - Do not. Set the “Mic Input” toggle switch on the back of the EG2-PCX to the input you want to use. You will need to use the USB port if using the EGG and the ultrasound machine simultaneously. Manufacturers of the terminal should notify users and operating personnel of the following safety information by incorporating these guideline into all manuals of the product.
